

Box Guard

Box Guard Specifications

Models 100, 600, 900, 1400, and 2000 series

Box Guard valve box protectors shall be used as a durable, semi-rigid base plate and piping inlet and outlet cover for valves and other irrigation system components requiring subsurface protection for installation or maintenance. Each Box Guard component shall be made from polypropylene that is resistant to weather, moisture, and chemical action of soils. Each Box Guard component shall be manufactured white in color to enhance the visualization of components housed within the valve box.

Each series of Box Guard shall be compatible with all major manufacturers of valve boxes, both round and rectangular models.

The base plate shall have a stepped lip around its outer edge to enhance the mating of base plate to valve box. The base plate shall have pre-drilled wire holes to allow easy access for wiring penetration into the valve box space.

The Box Guard side guards shall be installed and secured with a heavy duty, outdoor rated, adhesive tape.

The Box Guard shall be manufactured by Box Guard, 6115 NE 195th Pl., Kenmore, WA 98028.
